

NOTICE: Without proper rock placement this heater will not heat.

Proper rockplacement ensures rapid heat up time and ensures normal room temperatures are achieved.

Instructions for placing rocks

1. Put smaller rocks in first around the outer perimeter of the heating chamber.
2. Completely fill all four sections (front, 2 center sections between elements, and back). In the outer sections, use smaller rocks placed more tightly (see note b). Place rocks loosely in the center 2 sections (see note a). Be sure rocks completely cover the elements (see note c).
3. Loosely cover the tops of all elements a minimum of 2" to 3".
